

# Threat Defense Investigation & Research Report

Reading

50m

✓ Status Incomplete

## Introduction

This activity is the first activity you perform in a sequence of activities that leads to the project for this course. In this activity, you will look at a list of high-profile cyber attacks and choose any one attack that you would research on and create a report later in the course.

The report that you develop in this unit is your project for this course and will be evaluated.

## Instructions

Given below is a list of significant cyber attacks happened in the past:

- The Stuxnet Virus
- Marriott data breach
- United Nations data breach
- Microsoft customer support database breach
- Lifelabs data breach

Conduct a high-level research to choose an attack that interests you the most.

## Conclusion

Now that you have decided which Cyber Security attack, you are going to conduct a research and analyze your findings in the next activity.
