Report on Company types and stakeholders

Scenario

“The organization that hired you has asked you to create a report identifying the important factors and stakeholder groups that should be considered when dealing with various security incidents.”

Develop Report

For this activity, you will want to refer to your notes from the previous Case Study activity.

Start a document for your case study. You will call this your Company Types and Stakeholders Report. While working through the **Company Types and Stakeholders** case study, consider the following:

- Investigate the company and list at least 7 Stakeholders attached to the company. Be as specific as you can (i.e. state CIO rather than “management”).
- Identify if the company is privately owned, publicly traded (on the stock exchange) or quasi-public in nature. Explain how the ownership of the company could affect the stakeholders involved.
- Does the company need to follow any specific laws or reporting standards (i.e. PHIPA)? How might this affect stakeholder selection?
- Give examples of at least 3 specific incident types, (i.e. Data leak, Ransomware, Intellectual Property loss) and explain what stakeholders may need to be immediately notified at the point of incident discovery, or notified after the fact.
- Be sure to discuss and consider differences between internal and external incidents, timelines, regulations and legal compliance requirements, as well as any incident types that might be unique to the specific company or industry type.
- Provide an introduction and overview to your chosen organization. Explain how the organization is set up, its size, industry, and describe the types of stakeholders it likely has.
- When highlighting specific examples of security incidents it may face, make recommendations based on the incident type as to what stakeholders need to be informed of and/or involved in each incident response, as well as when and how this should

happen.

Save your report in a format that can be easily shared with a colleague, stored in your PKM, or included in your professional portfolio.

Conclusion

By exploring a specific company you will gain a deeper understanding of the factors which impact an organization, and affect the decisions it makes in order to handle security incidents.

Next, you will share your report with your peers, and provide feedback on their reports.
