Analysis of Intelligence Reports

Assignment

1h15m - 1h30m

✔ Status   Incomplete

Introduction

When it comes to cyber threat intelligence, there are many different kinds of reports that may be created based on the audience that they are intended for, the requirements of investigators, or the threat landscape of a business. Here is an activity to help you get an in-depth understanding of intelligence reports.

Instructions

In a group of two or three, create a presentation on intelligence reports; the presentation should focus on the following:

- Five common types of threat intelligence reports
- How we evaluate the information that is contained within these reports
- What kinds of IOCs are available to us
- What kinds of advantages we can derive from these reports

👉 In addition to creating a presentation, identify any single type of report and develop a structure or template of the report. Explain what value this particular report adds to the threat hunting process and how.

⚠ The presentation should not be more than four slides and the report should not be more than two pages.

Draft your presentation and the report template on Google Slides/ Google Docs. Once they are ready, post the links to Discord for any peer feedback.

✔ Mark Completed

How well did this activity help you to understand the content?
